

# ActivIdentity Solutions for Healthcare

▶ solution brief

## Solutions for Healthcare

ActivIdentity simplifies the lives of doctors and nurses by eliminating password frustration from their workday. These solutions make access to systems easy, more secure, and free of password complexity.

ActivIdentity Solutions for Healthcare work with leading applications, web portals, identity management and physical and logical network access solutions to deliver proof of identity services necessary for the privacy of medical data and rapid access to patient resources. These solutions have been deployed at a spectrum of healthcare providers, from local clinics to large national hospital systems.

## Identity and healthcare

Healthcare organizations must be able to provide positive proof that electronic activities are accurate, reliable, and auditable. Proof of identity and credential management provides the foundation to solving these requirements.

Knowing who has access to computing resources and maintaining the privacy and fidelity of sensitive data are fundamental requirements for every healthcare IT department. Proper security and identification are paramount to satisfying legislative requirements and their responsibilities to patients.

Measures for protecting medical applications and ensuring privacy often rely on complex password policies, which provide only marginal security and limited proof of identity.

New applications and security requirements from regulations exacerbate the problem, with a growing number of difficult passwords used as credentials. Password complexity hurts productivity, impedes the time available for patients, and leads to overall end-user frustration.

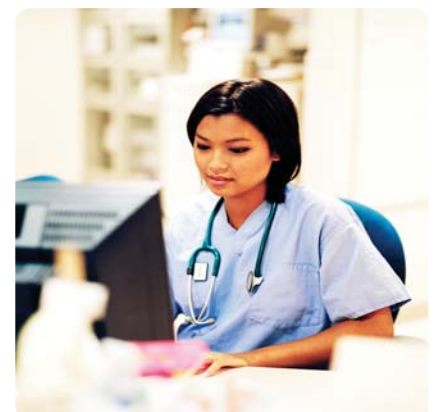

## Key advantages

- Full suite of integrated solutions for proof of identity and credential management.
- Vast application support including support for healthcare patient record software.
- Supports leading Identity Management platforms including IBM®, Microsoft®, Novell, and Sun®.
- Supports CCOW context management through integration with Carefx® products.

## Highlights

Solutions for Healthcare provides digital identity assurance to healthcare environments in order to:

- Meet regulatory requirements (including HIPAA) for proof of identity and strong access controls to patient data.
- Reduce time spent logging into applications, leading to more time for patient care.
- Provide fast access to patient data to personnel, and ensure privacy and security without password headaches.
- Provides secure access from anywhere – in the doctor’s office, on the hospital floor, or from home.
- Dramatically reduces high help desk costs incurred by forgotten passwords.

## ▶ ActivIdentity Solutions for Healthcare

### ActivIdentity solutions

#### Single Sign-On

ActivIdentity SecureLogin SSO provides fast, secure access to applications without prompting the user for additional passwords. Our solutions support healthcare requirements for shared kiosk workstations, fast user switching, and strong authentication. Kiosk supports leading proximity devices for handsfree authentication.

Together with Carefx, the Single Sign-On Solution for Healthcare provides doctors and nurses with rapid access to a patient record across multiple CCOW-enabled applications.

#### Strong Authentication

ActivIdentity strong authentication solutions help healthcare organizations provision and manage strong authentication devices including biometrics, proximity badges, smart cards, USB tokens, and one-time password tokens.

ActivIdentity strong authentication solutions

help protect VPNs, web portals, wireless access points, and dial-up network access.

#### Smart Employee ID

ActivIdentity Smart Employee ID utilizes smart card technology to provide a single ID for photo identification, physical access, and authentication to networks and applications. Smart Employee ID also supports PKI-enabled applications such as secure encrypted e-mail.

#### Secure Information and Transactions

Smart Employee ID paired together with Adobe® Intelligent Document Platform provides proof of identity with document workflow and enables electronic document security features such as digital signatures and document encryption.

### Leadership and experience

“Our goal is to accelerate access to medical IT services, and to maintain the highest standards of security and privacy that patients expect and deserve.”

Dr. Harold Robles

Vice President of Healthcare Solutions, ActivIdentity

- President Emeritus of the Albert Schweitzer Institute for the Humanities

- Chairman of Medical Knowledge Institute
- Executive Committee, The Club of Rome
- Executive Committee, Bob Pinedo Award for Contributions to Improvement in the Care of Cancer Patients
- Co-Founder of The International Trust for Children’s Health Care

### About ActivIdentity

ActivIdentity, Inc. is the trusted provider of identity assurance solutions for business and government worldwide.

ActivIdentity provides the only fully integrated platform that allows organizations to issue, manage and use trusted digital identities for secure access, secure communications, and legally binding digital transactions.

ActivIdentity customers experience multiple business benefits including protection of resources and information, enhanced workforce productivity and regulatory compliance.
