SecurEnvoy The future of authentication

SecurEnvoy is pioneering the authentication space to meet the growing security needs of modern businesses.

Today's organisations need watertight security, particularly now that 'cloud computing' has empowered users to access data any time, from anywhere. However, they also need cost savings, optimum productivity and a renewed focus on environmental action. So SecurEnvoy's ethos is simple: Give control back to businesses and users without compromising on security or access.

Unlike traditional authentication solutions, SecurEnvoy's suite of products can be installed and integrated into existing IT systems quickly. And crucially, they avoid the need for much of the additional cost or remote deployment of the traditional approach to security software, creating an unprecedented zero-footprint solution while ensuring long-term cost benefits.

A global leader in business authentication, SecurEnvoy's products – SecurAccess, SecurPassword, SecurICE and SecurMail – have been adopted by businesses all over the globe.

By strengthening mobile security without breaking business budgets, SecurEnvoy helps you manage risk, maximise reward and retain control of your sensitive data.

SecurICE Authentication for the modern business

From fire to flooding, businesses need contingency plans to cope with emergency. But how can companies continue to access data and operate in the event of a disaster?

SecureEnvoy's SecurICE provides businesses with secure access to corporate systems in an emergency, without needing costly smartcards or tokens. SecurICE is a revolutionary solution to the age-old problem of emergency access and continuity.

SecurICE lets businesses turn on rock-solid, two-factor authentication for all its users in an emergency – using their existing Microsoft password and a time-sensitive passcode sent to their mobile phone.

In line with SecureEnvoy's zero-footprint approach and hardware philosophy, there's no need for extra devices or additional PINs – making SecurICE the perfect two-factor authentication method in the event of a disaster.

Benefits

- Enhanced security in high-risk situations
- Immediate, secure remote access for all users in an emergency
- Uses existing passwords and infrastructure
- No lengthy enrolment procedures
- No need to manage extra devices and no software needed on phone

For more information about SecurICE or SecureEnvoy's other products, visit www.SecureEnvoy.com

So how does it work? Configurable warning disaster messages – along with time-sensitive passcodes – are sent through SMS to a pre-identified group of users with just one click from the SecureEnvoy Deployment Wizard. The user simply connects to their company resource and enters their two-factor authentication code.

Worried about network coverage or SMS delivery delays? By pre-sending the first required passcode, SecurICE eliminates these worries to ensure you can keep on working.

SecurICE is changing the game for business continuity. No tokens, no fuss... Just rock-solid, two-factor security in the event of a disaster.
