

IT Governance, Risk and Compliance (IT GRC) solutions from Baronscourt help your customers demonstrate compliance and implement user self certification.

Join the MetaPartner Program™ for Greater Profit Potential

MetaCompliance: Risk and Policy Management for the Enterprise.

The MetaPartner Program from Baronscourt provides partners with access to a suite of products which meets the needs of organizations seeking to automate the demands associated with IT security and compliance.

MetaCompliance enables compliance and security managers to automate the creation and control of business and IT policies, implement industry mandated compliance initiatives and manage and monitor acceptance among geographies, business units and personnel.

A major regulatory and legislative requirement surrounding compliance and governance is to measure the security posture of the organisation, document security policy and promote awareness of that policy among employees. The MetaCompliance suite of

software automates the development, distribution and deployment of risk assessments and compliance policies across the enterprise.

This is a fast growing market, encompassing every organization of any significance and almost every vertical market sector. All our partners seek to provide their clients with technology solutions that generate healthy profit margins from

product sales, consulting and implementation services.

IT Governance, Risk and Compliance (IT GRC)

Today, many organizations are looking for solutions that can help them cost effectively demonstrate and sustain compliance with policies and regulations.

The MetaCompliance Suite from Baronscourt is a purpose built IT Governance, Risk and Compliance solution, which has a focus on the self certification of the user in order to reinforce correct corporate behaviour and responsibility.

IT Security and Compliance Frameworks ISO27001, CoBIT, ITIL

The only credible method of dealing with information security is through a state of constant vigilance based on a governance methodology like ISO27001, backed up with best in class technology.

MetaCompliance provides the best, most practical and cost effective solution to help organisations manage policies and demonstrate compliance with both new and existing regulations. In particular, the software provides an excellent backdrop for the commonly adopted best practice methodologies such as CoBIT, ITIL and ISO 27001. These IT Governance frameworks provide an

“All of our existing customers have expressed an interest in automating their policy communication. We expect the MetaCompliance Suite to be our best product for generating profit margin this year.”

Declan Hughes, Operations Director,
Maxima PLC

“IT GRC can improve an organizations ability to analyse and survive Information Technology risk.”

Gartner, Compliance Technologies 2007

accepted, proven and sustainable way of dealing with the need to protect the integrity of the IT infrastructure upon which the organisation is built.

MetaCompliance helps deal with a key demand of these directives, which is to document security policy and promote awareness of that policy to employees across the organisation.

Data Protection – PCI DSS

PCI compliance is relevant to any organization that handles, transmits, stores and processes information from credit cards. The PCI standard is a regulation based on 12 requirements to outline how sensitive consumer data is handled by companies both operationally and technically. The consequences of non compliance with PCI DSS are severe and include hefty fines and sanctions.

Requirement 12 of the PCI directive states that organizations must have a security policy, and that all users must be aware of and understand this policy. Only by automating this requirement with the MetaCompliance solution can an organization sustain compliance with requirement 12 to any level of success.

6 Key Reasons to Join the MetaPartner Programme:
