

GFI FAXmaker

for Exchange/SMTP/Lotus

Network fax server for Exchange/SMTP/Lotus

GFI FAXmaker is a fax server that makes sending and receiving faxes an efficient, simple and cheaper process. The problems with manual faxing – waiting for the fax to go through, the need for printouts, physically walking to the fax machine – are solved because GFI FAXmaker allows users to receive and send faxes directly from their email client.

The benefits are numerous: Less time is spent sending, collecting and distributing faxes, noticeable cost savings and each fax received or sent is saved in digital format as an email. With tens of thousands of customers and numerous awards, GFI FAXmaker is the leading fax server on the market, offering reliability and enterprise functionality at an unbeatable price.

GFI FAXmaker is easy to install, requires little maintenance and integrates with existing messaging clients and customized solutions.

GFI FAXmaker integrates with your mail server, allowing users to send and receive faxes and SMS/text messages using their email client. The company can also search for and backup all faxes in the same way that emails are stored and retrieved on the network.

■ Active Directory integration reduces administration

GFI FAXmaker for Exchange/SMTP/Lotus was designed from the ground up to minimize its administration. It integrates with Active Directory and therefore does not require the administration of a separate fax user database. User-related settings can be applied to Windows users or groups directly.

■ Supports Microsoft Exchange, Lotus Domino and other SMTP servers

GFI FAXmaker integrates with Exchange Server 2000/2003/2007 via a standard Exchange SMTP connector. **There are no schema updates to Active Directory.** This makes GFI FAXmaker scalable and indifferent to new Exchange service packs and versions. Microsoft Exchange 5.5 is supported by creating a routing rule on the Exchange 5.5 SMTP connector. GFI FAXmaker can be installed on the Exchange server or on a separate machine, in which case no software has to be installed on the Exchange server itself! GFI FAXmaker also integrates with Lotus Domino and other popular SMTP servers.

Benefits

Why choose GFI FAXmaker for Exchange/SMTP/Lotus as your fax server?

- More than 10 years as the leading fax server on the market
- Award-winning solution; voted #1 by Windows IT Pro readers 3 years running
- Excellent price-performance ratio and immediate return on investment (ROI)
- Support Microsoft Exchange 2000, 2003, 2007, Lotus Domino and MDAemon
- Easy-to-use and learn
- Install and forget: No burden on administrators

■ Fax over IP (FOIP) support

With the optional Brooktrout SR140 host-based module, GFI FAXmaker integrates with your existing IP PBX to offer Fax over IP (FOIP) capabilities without any hardware requirements. With FOIP you can easily send faxes over the Internet whilst integrating with the existing IP infrastructure. GFI FAXmaker's FOIP may also be used to implement Least Cost Routing (LCR); this results in cost-effectiveness that is achieved through a reduction in international calls dialed since calls are translated into a local call at the recipient's country. FOIP may only be employed if the appropriate FOIP-enabled software or devices are installed.

■ Supports Lotus Notes & SMTP/POP3 servers

GFI FAXmaker integrates via the SMTP/POP3 protocol with Lotus Notes and any SMTP/POP3 server. It can be installed on the mail server itself or on a separate machine. In the case of Lotus Notes, @FAX addressing is supported.

Automated fax delivery/inbound fax routing

GFI FAXmaker can automatically route incoming faxes to the user's mailbox or to a particular printer based on a DID/DDI/DTMF number or the line on which the fax was received. Faxes can also be forwarded to a public folder or assigned to a network printer per installed fax port.

SMS/texting gateway allows users to send SMS/text messages from their desktop

GFI FAXmaker's SMS gateway enables network users to send SMS messages from their desktop; this allows them to easily contact business colleagues and associates who are on the road or away from their desk. Using the SMS gateway rather than a mobile phone is faster (no need to use the phone pad) and saves users the cost of the SMS message. SMS messages can either be sent via an Internet-based SMS service or through a mobile phone or PCMCIA mobile card. The SMS gateway can also be used for administrative alerts, for example, to notify an administrator of critical system outages or application problems. Any email-enabled application can send SMS messages via the GFI FAXmaker SMS gateway. A central log of SMS messages permits the control of SMS use.

Multiply the value of GFI FAXmaker with powerful reporting

The integrated GFI FAXmaker ReportPack offers several default and customizable fax and SMS reports including:

- Fax usage per user or over a period of time
- Fax line usage
- SMS usage per user or over a period of time
- Estimated cost savings.

Supports multiple mail servers & clustering

Because of its flexible infrastructure, GFI FAXmaker can send and receive faxes for users on different mail servers. It can also support a mix of Exchange 5.5, Exchange 2000/2003 servers or even SMTP/POP3 servers. Active and passive clustering is fully supported because GFI FAXmaker does not require any software to be installed on the mail server itself; simply configure both mail servers in the cluster to be able to send and receive faxes via GFI FAXmaker.

Robust & scalable multi-line fax server

GFI FAXmaker includes a robust fax server, which can scale up to 32 lines per fax server using fax boards or active ISDN cards. For smaller installations, Fax modems can be used as well. GFI FAXmaker also supports the use of the Windows 2000/XP/2003 fax drivers for wider hardware support.

Native ISDN support

GFI FAXmaker natively supports ISDN, allowing you to use inexpensive active ISDN cards and get multi-line faxing and inbound routing at a fraction of the price of using multi-line fax boards.

Archive faxes to GFI MailArchiver, to SQL, or other archiving solution

GFI FAXmaker allows you to archive all faxes to GFI MailArchiver, a SQL database or to an email address. GFI MailArchiver is an email archiving solution that stores all mails in a SQL database and allows users to easily search for past emails and faxes. GFI FAXmaker can be configured to forward all faxes to GFI MailArchiver, allowing users to search for past faxes in the same way as emails. With the OCR module, faxes can also be searched based on what text they contained.

Optional OCR reading & routing module

The optional OCR module can be used to convert all incoming faxes to a readable text format using Optical Character Recognition (OCR) technology and then route the fax to the correct user by finding keywords related to a recipient, for example his first name, last name or job function. If GFI FAXmaker cannot match a recipient, it will route the fax to the default recipient/router. This feature is also especially handy if you plan to archive all faxes, since it makes searching for a particular fax much easier.

Junk fax filter

GFI FAXmaker includes a 'junk fax filter' that can auto-delete spam faxes on the basis of sender number.

■ Send faxes from any application

To send a fax, users print from their word processor to the GFI FAXmaker printer, or create a new message in their email client (e.g., Outlook or Outlook Web Access). The user then selects the recipient(s) of the fax from the Outlook Contacts list (address book) or enters the fax number directly. After clicking on the "Send" button, the fax is sent and the user receives a transmission report in his/her inbox.

■ Receive faxes in your email client – in fax or PDF format

GFI FAXmaker delivers faxes to the user's inbox in TIF – fax – format or Adobe PDF format. This enables users to check faxes from anywhere in the world, using either a normal desktop email client (for example, Outlook) or a web-based email client (for example, Outlook Web Access). Receiving faxes in PDF format means the fax can be forwarded to anybody, and it also allows for easy integration with document archiving systems or workflow software/procedures.

■ Allows you to send/receive faxes via your handheld or mobile

Via GFI FAXmaker's Email2Fax Gateway, the email clients of handhelds like the Blackberry and Pocket PC (2003 upwards) can be used to send faxes. The Blackberry and Pocket PC email clients can also receive faxes and fax reports as emails. The Blackberry devices have built-in PDF viewer that seamlessly integrate with GFI FAXmaker's PDF capabilities; most Pocket PC 2003 also ship with built-in PDF viewers. As long as they have image-viewing capabilities to view received faxes, GPRS mobile (cell) phones that are email-compliant can use GFI FAXmaker in the same way as handhelds.

■ Supports Outlook Contacts

There is no need to keep a separate fax address book - just select the recipient's "Business Fax" entry from the Outlook Contacts list or the Global Address Book: No need to duplicate address entries.

■ Attach Office documents, PDF, HTML and other files

Users can attach Microsoft Office, PDF, HTML and other files to their fax. These are rendered to fax format on the fax server. The 'Send to Mail Recipient' command, available in Microsoft Office and other applications, can therefore also be used to quickly send a document as a fax.

■ Automatic application integration & mail merges with NetPrintQueue2FAX

GFI FAXmaker's NetPrintQueue2FAX feature allows you to embed a fax number in a document and 'print to fax' from almost any application, from anywhere in the network - without having to enter the fax number separately. This feature is especially handy for accounting applications; an invoice can be faxed simply by embedding the fax number in the document. No application integration or development is required.

■ Fax broadcasting using Microsoft Office mail merge

Using the mail merge facility of Microsoft Word/Office, you can send personalized fax broadcasts. Because Microsoft Office supports ODBC, the recipient list can be retrieved from any data source, including Microsoft SQL Server, Microsoft Access and many more.

System requirements

- Windows 2000/2003/XP server machine with at least 256 MB of RAM and an 800 MHz processor
- A professional fax device: For a complete list go to <http://kbase.gfi.com/showarticle.asp?id=KBID001220>
- If you are installing GFI FAXmaker on a separate machine, the IIS SMTP service will need to be installed
- If using Windows 2000, ensure you have Service Pack 3 or later installed
- For more detailed system requirements please see the manual.
