

One Time Password

One time passwords via SMS secure strong authentication

Our work places are becoming increasingly mobile. This means that the access to your company's information and applications must be accessible regardless of time and place. This requires high standards when it comes to security. Today, it is not enough with simpler methods of authentication, like user name and password. The login procedure needs to be strengthened.

The **Nordic Edge™** One Time Password Server gives you the extra protection required for you to gain secure access to your company's information and applications. When logging in to an application, user name, password and a one time password must be stated. The one time password is sent via SMS to your cell phone.

The **Nordic Edge™** One Time Password Server is an easy and powerful solution that is integrated into the existing IT-environment. The introduction is uncomplicated and the need for training is minimal. The solution uses existing infrastructure and resources, in other words, there are no expensive additional costs.

Why use One Time Password?

- Increases login security
- Secures the company's information and applications
- Easy to use
- A one time password is sent via SMS
- Uses existing infrastructure and resources
