strengthen
relationships &
create new opportunities

reduce
exposure to
network breaches

support
compliance goals

keep
the lid on TCO

bring anytime,
anywhere protection
to anytime,
anywhere access

Despite the growth of anytime, anywhere access, many organizations are reluctant to expose sensitive resources to mobile and remote users. The risks and costs are viewed as being too high.

Now, with industry-leading solutions from RSA Security, you can mitigate the risks of mobile and remote access while realizing the benefits of expanded access: increased productivity, enhanced compliance, reduced costs and a wealth of new business opportunities.

THERE'S A RELENTLESS DRIVE FOR ANYTIME, ANYWHERE ACCESS

Powerful forces are driving the growth of mobile workforces and creating a demand for secure mobile and remote access. Businesses face constant pressure to enhance competitiveness, increase employee productivity, empower off-site workers and enable online transactions for customers and partners.

Simultaneously, there has been rapid growth in high-speed Internet access, a proliferation of access technologies and devices, and a steady march toward making critical applications and data available online. As a result, users can easily conduct business at any time and from almost any location.

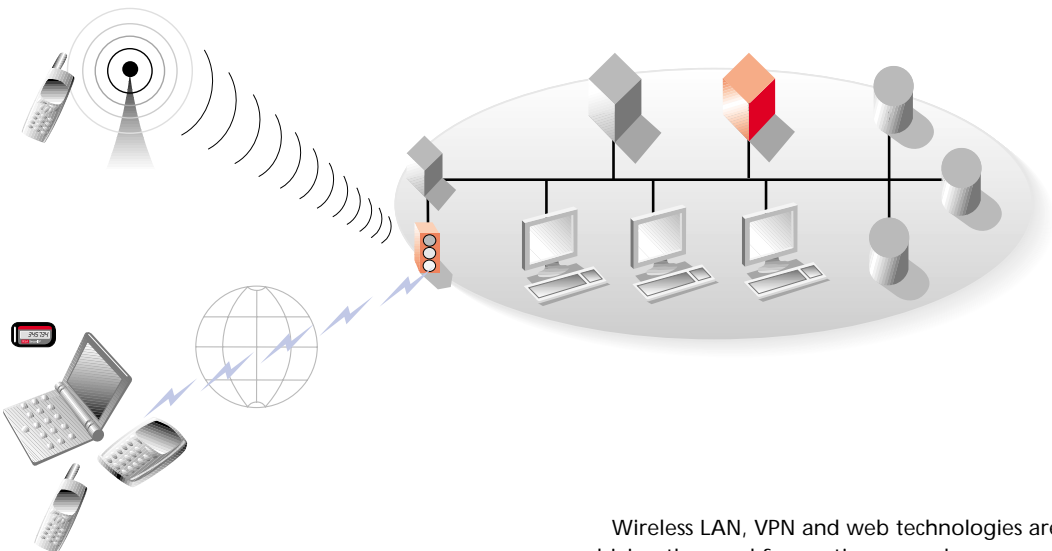

EASY ACCESS IS A TWO-EDGED SWORD

With these trends, however, comes a heightened awareness of network security needs. The same technologies that empower legitimate users can also benefit network intruders, identity thieves and hackers. Password-based identities, which are still widely used to authenticate external users, are easily compromised, so you can't know for certain who is accessing your network. Yet, as more data is stored on networks, a growing body of regulations holds businesses accountable for safeguarding information entrusted to them.

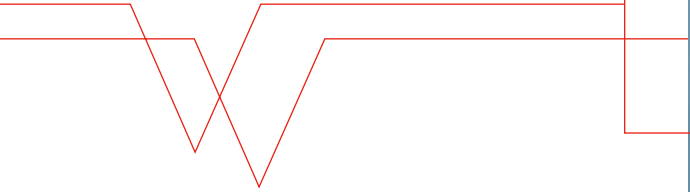

More than ever, organizations need secure access capabilities that open the door to opportunity while closing it to intruders — all at a reasonable cost.

SECURE ACCESS HELPS POWER YOUR BUSINESS STRATEGIES

RSA Security rises to this challenge, providing Secure Mobile and Remote Access solutions for today's most demanding environments. Combining industry-leading strong authentication technology with comprehensive services and an extensive network of strategic partnerships, these solutions help you dramatically enhance protection for anytime, anywhere access. Enhanced security is not the only benefit, however. Secure Mobile and Remote Access solutions also help you reduce costs related to secure access, achieve compliance goals and confidently pursue new online initiatives.

Wireless LAN, VPN and web technologies are driving the need for anytime, anywhere access.

there's a relentless
drive for anytime,
anywhere access

ESTABLISH CONCLUSIVE PROOF OF IDENTITY

Secure Mobile and Remote Access technologies from RSA Security are designed to allow you to create trusted identities for employees, customers, partners, suppliers and consultants. Convenient to use but nearly impossible to compromise, these capabilities force users to present conclusive proof of identity before they can access protected resources, thus thwarting network intruders.

To meet varied requirements, RSA Security offers a range of authentication options:

- The RSA SecurID® solution, which is based on the industry's leading strong authentication technology, is easily recognized by distinctive user tokens, which display a time-sensitive access code. Formats include key fob and PIN Pad hardware tokens and software tokens for desktops, notebooks, PDAs and mobile phones.
- The RSA Keon® solution is designed to provide a highly scalable way to manage secure identities based on digital certificates, with user credentials protected by strong encryption.

These secure access solutions readily accommodate your preferred way of doing business. They are engineered to work seamlessly with the most widely used access methods — including SSL VPN, IP Sec VPN, portals, terminal services, Microsoft Outlook Web Access and wireless LAN — as well as with leading vendors' business applications.

EMPOWER YOUR MOBILE WORKFORCE.

Secure remote access enables your employees to be productive and responsive, regardless of their location.

STRENGTHEN RELATIONSHIPS AND CREATE NEW OPPORTUNITIES.

By safeguarding user identities — and the sensitive information they unlock — you earn the trust of customers and partners and inspire the confidence to jointly pursue new opportunities.

REDUCE EXPOSURE TO NETWORK BREACHES.

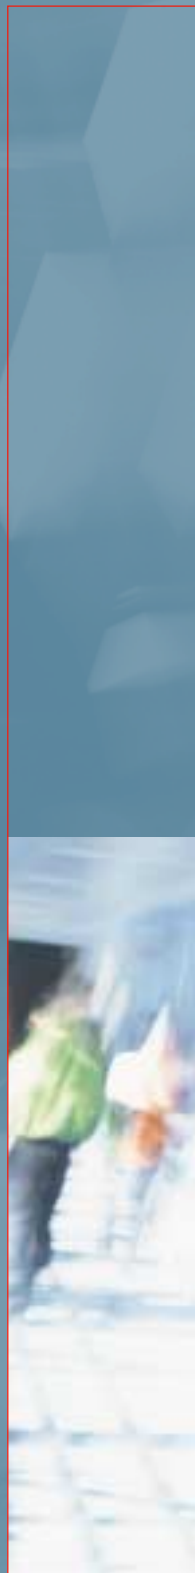

Strong authentication makes it virtually impossible for intruders to pose as legitimate users and thereby gain access to protected resources.

SUPPORT COMPLIANCE GOALS.

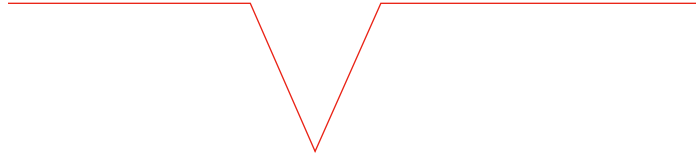

RSA Security technologies help you meet compliance requirements for end-user accountability while also reducing compliance related costs.

KEEP THE LID ON TCO.

By extending your solution across multiple access channels and applications, you can streamline user administration, password management and integration and deployment costs.

why choose RSA Security for secure mobile and remote access?

LEADERSHIP IN E-SECURITY

RSA Security is widely respected as a leader in e-security, with more than 20 years experience and more than 14,000 customers worldwide. Complementing our Secure Mobile and Remote Access solution, we offer solutions for Identity and Access Management, Secure Enterprise Access, Secure Transactions and Consumer Identity Protection.

INTEROPERABILITY THAT ACCELERATES ROI

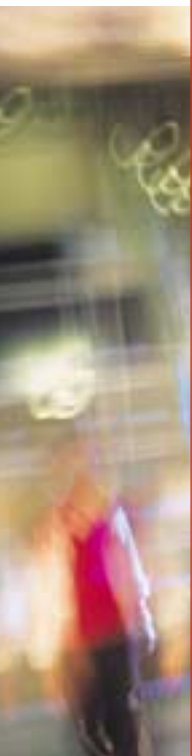

The more quickly and pervasively secure access capabilities can be deployed to support your business processes, the sooner you'll achieve your goals for enhanced protection and business enablement. Toward this end, RSA Security has strategic partnerships with over 1,000 technology firms to help ensure that the leading infrastructure products and business applications work seamlessly with our e-security solutions.

SERVICES EXPERTISE THAT HELPS ENSURE YOUR SUCCESS

Together with our services partners, we can provide the expertise and resources you need to maximize the business value of your solution. Depending on your situation, you may work with a certified channel partner, a Managed Security Services Provider (MSSP) or RSA Professional Services.

A COMMITMENT TO STANDARDS

RSA Security has played a leading role in authoring, developing and promoting e-security standards. This involvement allows us to help shape the future of e-security. It also provides investment protection for our customers and strategic partners by ensuring the long-term viability of our products.

EQUAL TO THE CHALLENGE

RSA Security helps you address the full range of mobile and remote access challenges.

- workforce mobility
- secure e-mail access
- vpn access
- partner extranets
- customer access
- regulatory compliance
- application access
- wireless access
- user administration

you can reach us
anytime, anywhere
